

Routes ($s \rightarrow t$):

$P_1 : e_0 \rightarrow e_L \rightarrow e_1$ $P_3 : e_0 \rightarrow e_3$

$P_2 : e_0 \rightarrow e_L \rightarrow e_2$ $P_4 : e_0 \rightarrow e_4$

Capacities $\mathbf{b} = (12, 5, 2, 6, 6, 6)$; maximum flow = trunk capacity = 12.

— trunk e_0 (bottleneck) — e_1 (tightest branch)
